Create Your Character

Design an original character once, then keep it recognisable in every new scene.

What you will create

An original character with a reference image, a turnaround and expression sheet, and new scenes where it stays on-model.

Made for: Storytellers, creators, brands, game makers and anyone who wants their own character.

Quick start

1. Open ChatGPT image generation (or another tool you test yourself).
2. Open **01-Creation-System.txt**, fill the [choices] and paste it.
3. Or paste a ready recipe from **02-Tested-Recipes.txt**.
4. Run the quality check below before you use the image.

Quality check

- ☐ Same colours and markings as the bible
- ☐ Same clothing and accessory details
- ☐ Same proportions and art style
- ☐ Expression/pose matches the request

If something important fails, regenerate or correct it. Do not publish an image that misrepresents a product.

Honest limitations

- Tiny details (stripes, buttons) can drift over many scenes; regenerate from the original reference, not from a later scene.
- Create original characters only – do not recreate existing characters, brands or real people.

Tested

GPT Image 2 (ChatGPT image generation), 2026-09-21. 4 real examples in this package, all unedited. Other tools are not claimed until tested.

License summary

Free for personal and business use. The images you create are yours within the AI tool's terms. Do not resell or redistribute this system itself.
