Product Hero Shot Starter

Turn an ordinary product photo into professional product imagery.

Quick start (5 minutes)

1. **Take one photo** of your product (checklist below).
2. **Open ChatGPT**, start a new chat, attach the photo **as your phone saved it**.
3. **Paste one recipe** from `02-Scene-Recipes.txt` (Clean studio, Premium, Lifestyle, Social ad or Website hero).
4. **Send**, then run the **Fidelity check**.
5. If anything on the product changed, **regenerate** using the fixes below. Never use a beautiful image that shows the product wrongly.

Want more control? Use `01-Master-Creation-Prompt.txt` and choose your own condition, position, light, camera and reflection options.

Source photo checklist

- ☐ The **whole product** is in the frame, nothing cut off.
 - ☐ It is **in focus** and not blurred.
 - ☐ **Daylight** or a bright room, no flash glare over labels or logos.
 - ☐ Labels, logos, buttons and important details are **clearly visible**.
 - ☐ **No hands or other objects** covering the product.
 - ☐ **No filters** or beauty edits (they change colours).
 - ☐ **Upload it as your phone saved it.** Don't rotate or crop it first unless it's genuinely the wrong way up. A plain background helps but isn't required. An ordinary kitchen-counter photo worked in our tests.
-

Fidelity check: compare the result with your photo

Check	Same as the real product?
Shape	☐
Colour	☐
Logo	☐
Label / text (letter by letter)	☐
Buttons / controls / icons	☐
Quantity (one product, same number of parts)	☐
Proportions / size next to props	☐
Condition (wear, scratches, as you chose)	☐
Reflection (plausible, or none)	☐
Physical position (could it really rest like that?)	☐

Any box fails on something important → regenerate or correct. Especially for anything you sell: the image must show what the buyer will receive.

Troubleshooting (from real tests)

Problem	What to do
Product shown upside down or icons redrawn	You probably rotated or edited the photo. Upload the original phone photo as it is.
Product stands in an unnatural way (e.g. balanced on its edge)	Set POSITION: "Lying flat on its back, as it would naturally rest."
Scratches and wear disappeared	Set CONDITION to "Preserve... Do not clean, polish or repair it", then check again. The AI still tends to tidy products. Always compare.
Reflection looks wrong (mirrored icons or text don't match)	Use REFLECTIONS: "subtle blurred glow" or "matte surface: no reflection".
Label, logo or buttons changed	Reply: "The [label/logo/buttons] changed. Regenerate keeping the product exactly as in the attached photo." Use a sharper, straighter source photo.
Headline misspelled (social ad)	Ask again with the headline in quotes, or leave the text out and add it in your design app.
Product looks pasted in	Ask for "a natural contact shadow and light matching the scene".

Honest use

Use these images only for the product shown. Don't change what the product is, its size, quantity, condition you are selling, packaging or label. Follow your marketplace's image rules and disclose AI use where required.

License summary: free for personal and business use. The images you make are yours to use within the AI tool's terms. Please don't resell or redistribute this starter itself.
